## Digitally Controlled Tunable Filters Up to 8 GHz

K&L Microwave, part of the Microwave Products Group, is now offering tunable filters covering ranges up to 8 GHz. The filters provide high Q tunable solutions for many of today's higher frequency applications utilizing 5-section coaxial cavity construction based on theoretical Chebyshev designs. Available tuning ranges include 2 to 4 GHz, 4 to 6 GHz, and 6 to 8 GHz. Typical bandwidth options range from 1% to 5%. Standard digital offerings are GPIB controlled and 110 VAC powered. Many other interfaces and control voltages are available upon request. Manually controlled versions use a dial knob and lookup table.

For further information, please contact K&L Microwave.
