4MP20-5060/60-GPO/PX Miniature Cavity Bandpass Filter

K&L Microwave's Mini-Pak family of Low Profile Cavity filters is the next level in combline filter design. It is available with center frequencies from 3.0 GHz to 18.0 GHz, and 3.0 dB bandwidths from 2 to 10%. The Low Profile MP Series offers up to 80% reduction in weight and volume when compared to more standard combline cavity filters. The reduction in weight and size, along with its durable construction, makes the MP Series ideal for military airborne, and other high vibration environments. In addition, the MP Series is available in a hermetically sealed version to further increase its performance in harsh military environments. For your custom designed MP filter, contact K&L Microwave's sales department, or view the Filter WizardSM program at www.klfilterwizard.com

For further information and performance data, please contact K&L Microwave.
